Class Activity 3

1. Evaluate online development sites/offline development software programs that you are interested in.

www.xbox.com is the online site which I am taking under consideration. This Product was first introduced in the United States in November 2001 by Microsoft that provide service to the users to order their gaming console and their games for delivery. This also provide games that will be added to their console account as soon as they buy on the website.

2. Examine professional outside Web site designers.

Experienced outside web designers build the visual elements of websites. They enquire about the re in order to get a clear picture of the message that has to be sent on the website. Once the specifications are specified, they create layouts, styles, and features that portray the client's services in a way that appeals to the website's target audience. They select the appropriate colors, fonts, styles, and visuals to distinguish the website. They make sure that the website is easy to use and that the content is presented in an understandable and accessible manner. There shouldn't be too many clicks to get to any part of the website.

3. Determine Web development tools for your E-Commerce site.

I used WordPress for my E-commerce website and adobe XD for the prototype.
